Meeting — Summary LLM

Bas Donkers, Dennis Fok, Finn-Ole Höner
May 7, 2024

Updates

Found the source for the spikes and fixed it: `.generate()` is the wrong method, need `.forward()` → wrong conditionals! Now maximizes the likelihood and faster!

- New generated slogans seem better, space looks more interesting (have yet to do the "box" normalization)
- Maybe even further performance gains by using `past_key_values`
- Idea: LLM judge to assess grammar / quality of slogans?
- (MLFlow)

Admin:

- ☐ SLURM application
- ☐ Set appointment for pre-defense
- ☐ Find third assessor
- ☐ Complete data management survey
